

**Chandni Bhowmik** holds a master's degree in Computer Security from Rochester Institute of Technology where she spent time researching neural networks for digital image security. She now leads a team within SeCoE focused on providing security evaluation of Intel's Platform Controller Hub. Her current expertise focuses on scrutinizing low-level embedded systems for security loop holes and proposing fixes. Her research interests include practical hardware hacking through hardware and software security exploits and tools. In her spare time, she teases Topher about his life choices.
